

Climatile®

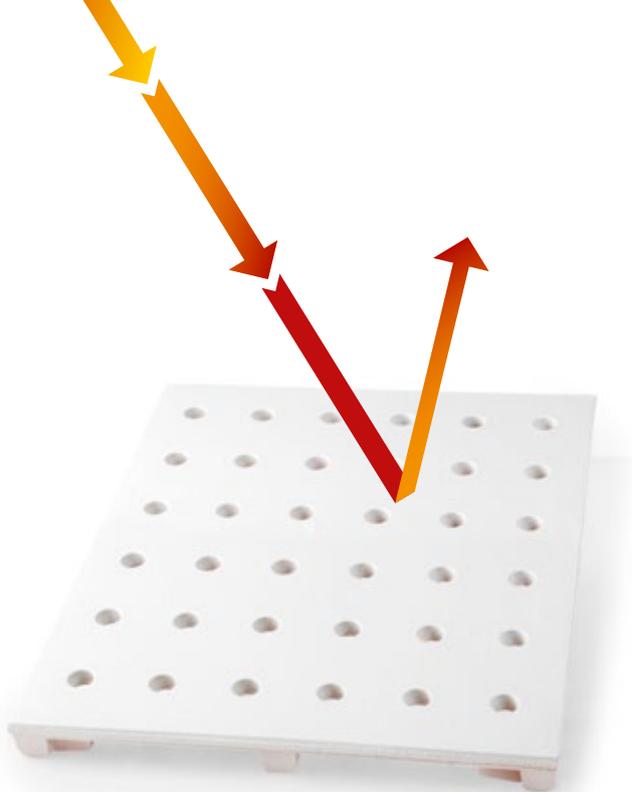

Clay tiles for flat roof coverings

CS ROOF TILES

Climatile®

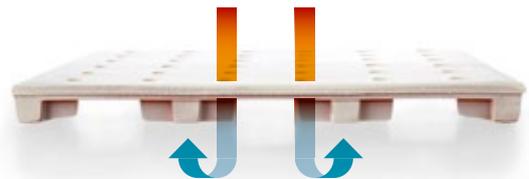

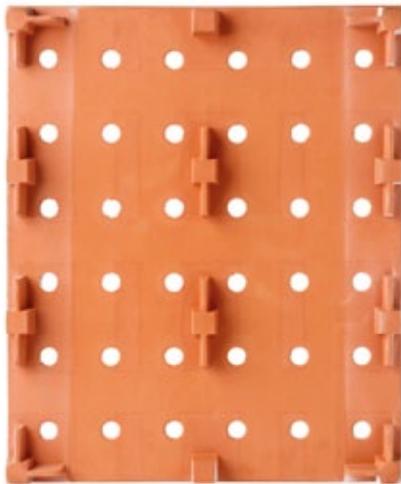

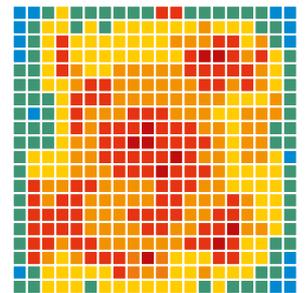

Climatile is a brand new clay tile, for the covering of non accessible flat roofs. Even in adverse weather conditions, the tile maintains its functional and aesthetic performance.

Heat reflection

The clay enamels chosen, white and silver, self-washable and unchangeable over time, are **highly reflective of sunlight**, reducing the 'heat island' effect.

Heat island

Temperature diagram of an urban center, where an increasing variation of temperature above 6°C can be observed between the outskirts and the sites of greatest concentration of buildings.

Simplicity, freedom and functionality.

Integrating in its design several feet that guarantee its constant stability and strength, **Climatile** avoids the use of accessory parts, considerably reducing installation time and costs. The tiles are simply laid on the covering and positioned with rigid plastic spacers that ensure uniform joints. Given its light weight and handling simplicity, the tiles can be easily removed, allowing single interventions whenever maintenance of screens is necessary.

Climatile provides all the advantages of a ventilated and shaded roof covering.

Its feet ensure distance to the thermal insulation layer creating a ventilation space. The air circulation is guaranteed by the holes consistently distributed along the piece. The relationship between the diameter of the holes and the thickness of the tile ensures that the entry of sunlight through the hollow area is insignificant.

Climatile®

Tile dimensions (approx.)	42 x 35 cm
Tile weight (approx.)	4.45 kg
Tiles per m ² (approx.)	6.5
Tiles per pallet	216
Pallet weight (approx.)	960 kg

Climatile is produced using the most advanced and innovative technology currently available, particularly in the pressing, drilling and firing processes. It presents an optimum level of water absorption as well as the physical and chemical characteristics necessary to ensure the best performance in icy conditions and meets all functional requirements of a flat roof only accessible to maintenance.

Printed colours may not be an exact match to the real colours of the products.
